#### Three Trees Farm *Chris Boissevain*

Cottage Grove, 541-942-9033, [www.redwiggler.com](http://www.redwiggler.com)

### Other options include:

Red wiggler or composting worms naturally colonize debris piles in most gardens. Check the bottom of a winter compost pile, decaying leaf piles or animal manure piles (such as horse manure, alpaca or chicken).

Ask a friend to let you scavenge their compost pile. It doesn't take many red wigglers to get a worm bin going! They will multiply rapidly in ideal conditions! Do NOT use nightcrawlers—they do not survive in a worm bin.
