### BEFORE THE BOARD OF COMMISSIONERS OF LANE COUNTY, OREGON

ORDER NO: 13-04-30-04

IN THE MATTER OF ADOPTING THE PUBLIC WORKS FIVE-YEAR CAPITAL IMPROVEMENT PROGRAM FOR FISCAL YEAR 2013/14 THROUGH FISCAL YEAR 2017/18

WHEREAS, the Board of Commissioners has adopted a process for annual review and development of a Five-Year Public Works Capital Improvement Program (CIP) as outlined in Lane Manual (LM); and

WHEREAS, a recommended CIP for Fiscal Year 2013/2014 through Fiscal Year 2017/2018 has been developed following the adopted process in LM 15.575 including staff analysis, opportunity for citizen input, a public hearing on February 27, 2013, and deliberation by the Road Advisory Committee on March 27, 2013; and

WHEREAS, the Board of County Commissioners held a public hearing on April 30, 2013 on the recommended Fiscal Year 2013/2014 through Fiscal Year 2017/2018 Department of Public Works Capital Improvement Program; and

**WHEREAS**, the Board of County Commissioners discussed and considered public testimony, staff analysis, and the recommendation of the Roads Advisory Committee.

NOW, THEREFORE, the Board of County Commissioners of Lane County ORDERS as follows:

- 1. That the Fiscal Year 2013/2014 through Fiscal Year 2017/2018 Department of Public Works Capital Improvement Program, as attached hereto as Exhibit A (2014-2018 Capital Improvement Program), be adopted.
- 2. That the County Administrator be delegated authority to execute all contracts and agreements in connection with the Fiscal Year 2013/2014 through Fiscal Year 2017/2018 Department of Public Works Capital Improvement Program in accordance with the terms of LM 21.145.
- 3. That staff pursue all necessary actions to ensure timely construction of projects scheduled for Fiscal Year 2013/2014.
- 4. That staff perform preliminary design activities, acquire right-of-way, prepare planning actions, and permit applications necessary to ensure that projects scheduled for Fiscal Year 2013/2014 through Fiscal Year 2017/2018 remain on schedule.
- 5. That the cost of such actions and preparations, including any damages, be paid from the County Road Fund or in any manner permitted by law as authorized by the Department of Public Works or as further authorized by the Board of County Commissioners.

Sid Leiken. Chair

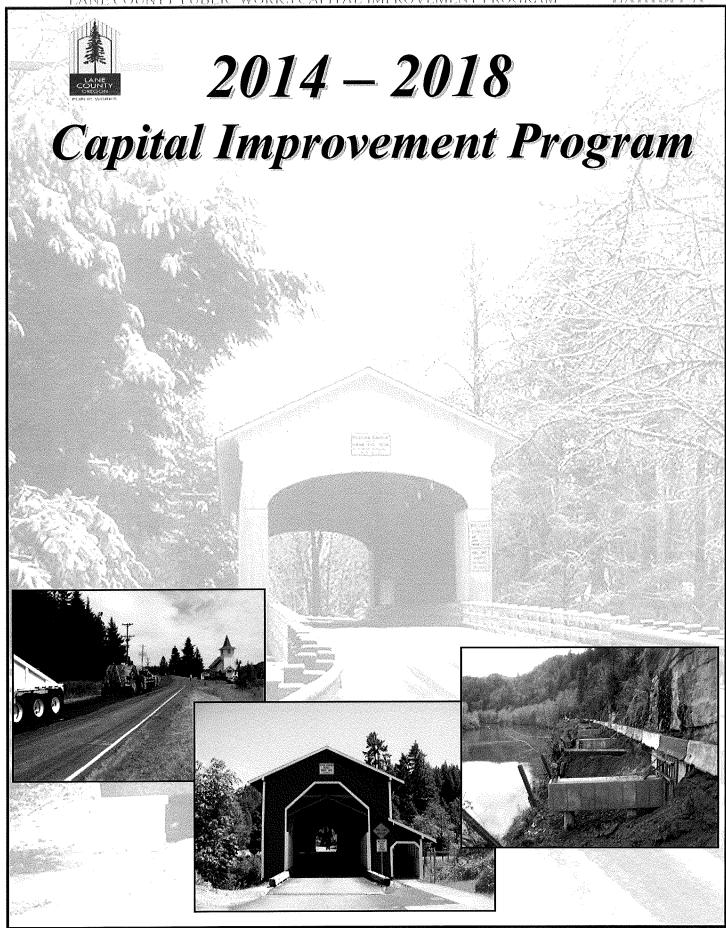

Lane County Board of Commissioners

ADOPTED this 30th day of April 2013.

APPROVED AS TO FORM

Lane County

AL COUNER

### **ADOPTION**

The Roads Advisory Committee recommended adoption of the County Road Fund portion of the Fiscal Year 2013-2014 to Fiscal Year 2017-2018 Capital Improvement Program in March 2013. The Board of County Commissioners adopted this program in April 2013.

### **Executive Summary**

The Lane County Capital Improvement Program (CIP) is a five-year planning document containing potential roadway related projects that will be publicly bid for construction during the five-year planning period. It is prepared in consideration of the County's financial projections, external funding opportunities, road maintenance needs, and public input. The CIP for fiscal years 2013/2014 through 2017/2018 was reviewed and discussed at Roads Advisory Committee (RAC) meetings held in Eugene in January and a public hearing held in February 2013. The Board of County Commissioners adopted the document after a second public hearing in April 2013. This publication becomes effective fiscal year 2013/2014, beginning on July 1, 2013.

The CIP is the Public Works Department's Road Fund expense plan for the next five years. The expenses in this CIP are consistent with the department's Road Fund financial plan (FinPlan). Lane County anticipates spending about \$18.0 million Road Fund dollars for capital improvement projects under the program. The majority of the Road Fund (\$15.0 million) is allocated towards pavement preservation needs during this update cycle.

The remaining allocations focus heavily on preservation, with \$1.375 million each allocated to both Bridge Rehabilitation and Preservation, and Covered Bridge Preservation. The remaining \$250,000 is allocated to Safety Improvements. All of these remaining allocations are primarily being utilized for local matches required to secure external funds. The local match monies allocated to prioritized projects in this CIP are expected to bring in an additional \$ 4.235 million in external funding for County roadway improvements in the next five years. \$2.349 million of these external funds come from the National Historic Covered Bridge Preservation Program and/or the Highway Bridge Program. \$1.886 million of these external funds come from the Local Highway Bridge Program. These bridge projects are managed by the Oregon Department of Transportation; only County matches are shown in the CIP summary tables for these projects. Another \$355,000 in external funds are for pavement rehabilitation work on Glenwood Blvd. and adjoining sections of East 17<sup>th</sup> Ave. These funds are directly reimbursable to the County, and are accounted for as project specific revenues in this CIP. These projects are designed and administered by the County. Unlike the bridge projects, the full construction costs of these projects are shown in this CIP. There are no major general construction projects in this update cycle.

This CIP publication provides project information sheets describing project scope, cost, and proposed solutions for each of the projects included in the CIP. In addition to listing funded projects, this CIP update continues to maintain a list of unfunded projects for development.

This CIP publication also maintains past CIP projects that are deleted or completed or in the process of construction. The project status sheet at the end of this document provides the status of past CIP projects.

### Introduction

Primary obligations of Lane County are to ensure personal safety, security of property, and preservation of infrastructure. The Lane County Public Works Department is tasked with protecting public assets, namely roads and bridges, by maintaining, replacing, or upgrading infrastructure in the transportation system. Maintenance and repair of the road and bridge system includes surface and shoulder maintenance, drainage work, vegetation management, guardrail repair, signing, striping, pavement marking, and signal maintenance.

The County road system also needs major improvements beyond regular maintenance and repair. Major improvements to the road system such as adding new road sections, widening existing roadways, providing bike lanes and sidewalks constitute capital improvements. Typically, general construction, bridge structures, safety improvements, and pavement overlays, involve a significant amount of Road Fund expenses.

As the custodian of a large inventory of public infrastructure, the County undertakes public improvement projects each year that are of public interest. When additional funding is available, the County allocates available resources to upgrade its existing infrastructure through the Public Works Department's Capital Improvement Program (CIP). Lane Manual Chapter 15 specifies how capital improvements shall be carried out. It mandates that major improvements to the County road system be scheduled through the CIP with public involvement and prioritization processes.

The CIP is the planning document that describes the County's five-year transportation related capital improvement program. The program is updated annually to allocate limited financial resources to projects providing the greatest return for moving people and goods safely and efficiently throughout the County. The five-year program is reviewed and adopted annually by the Board of County Commissioners. It identifies candidate projects, their funding, and schedules project executions. The plan helps provide for the most efficient scheduling and allocation of staff and other resources.

The capital improvement and maintenance projects that are planned in the CIP are executed through the Engineering and Construction Services (ECS) and Road Maintenance divisions of the Public Works Department. The Transportation Planning Section within the ECS Division is responsible for processing the CIP and publication of this document.

The purpose of this publication is to disseminate information to Lane County citizens about construction projects affecting communities. This is in conformance with Oregon Revised Statues (ORS) 279C.305 Least-cost Policy for Public Improvements; cost estimates in budget process; use of agency force; and record of costs. ORS 279C.305 requires a local agency adopt its capital improvement program 30 days prior to budget adoption. Lane County Capital Improvement Program is adopted in April or May of each year by the Board of County Commissioners.

### **Infrastructure Conditions**

The County currently maintains about 1441 miles of road and 418 bridges that are open to vehicular traffic. Collector and arterial roads comprise about 55% of the County road network. They carry more vehicular traffic and freight than do local roads, so they require frequent maintenance.

The road inventory tables below shows about 193 miles of the County's roadways are urban roads and about 49 miles of roadways are inside city limits. Urban collectors and arterial roads carry higher daily traffic volume. Since they carry higher traffic volumes, past CIPs have prioritized and completed several urban improvement projects.

In addition, County roads provide connectivity to national forests within Lane County. The Oregon Forest Highway Inventory maintained by the Western Federal Lands Highway Division has adopted about 207 miles of County roads as "forest highways." They carry logging trucks and are susceptible to rapid pavement deterioration if not prioritized and maintained periodically.

County roads pavement qualities are inventoried separately under the Pavement Management Program (PMP). Pavement sections are visually inspected for cracks, ruts, and any deformations. The pavement management software converts these visual qualities into an index on a scale of 0 to 100. The Pavement Condition Index (PCI), in most cases, is the basis for pavement maintenance priorities.

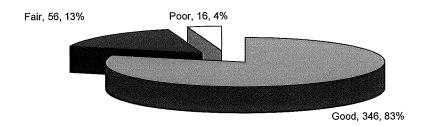

**Table 3: Bridge Inventory** 

| Bridge Material / Construction   | Quantity | Restricted<br>Weight<br>or Width | Closed |

<sup>\*</sup> As of April 2013

### LC Bridge Conditions Sufficiency Ratings

Likewise, all of the 418 county owned bridges are inspected periodically under the state's bridge inspection program, which uses the National Bridge Inventory System (NBIS). The NBIS informs local agencies about bridges that need attention. The overall physical condition of a bridge is expressed in terms of a "sufficiency rating" on a scale of 0 to 100. A sufficiency rating of 50 or less is considered poor. Poorly rated bridges are candidates for bridge replacement or rehabilitation, and are weight limited or closed. Bridge replacements prioritization is based on bridge inspection reports. Fair rated bridges are provided with regular maintenance with minor repairs. The pie chart above shows the status of Lane County bridges as of April 2013. About 4% of the bridges are candidates for replacement.

The CIP funds the major contracted maintenance and preservation projects for the large inventory of roads and bridges in the Lane County transportation system. The preservation and rehabilitation fund category is used to preserve and maintain the existing infrastructure. The general construction and structures categories address upgrade needs of the transportation system.

Thanks to past reliable federal funding, the County has been able to keep the roads and bridges in good shape. Past CIPs, when funding source was robust, completed several bridge replacements or urban improvement projects. The status of past projects is compiled at the end of this CIP. However, federal funding is uncertain or absent in future years so urban improvements are receiving no focus in the County CIP. While there is the large inventory of road and bridges to keep in repair, the County's funding sources have severely diminished. The following section discusses the County's fund sources.

### **CIP Funding**

CIP projects are funded through a variety of funds, as discussed below.

### **Federal Sources of Revenue**

The majority of land in Lane County is forested, much of it Federal. Historically, harvesting of timber on Federal lands has generated revenue for Lane County. In the early 1990s, timber harvests on Federal forest lands and associated revenues declined significantly. In the latter years of the decade, to address this decline, Congress enacted legislation that provided a guaranteed minimum payment in the event actual receipts dropped below a predetermined level. This guarantee was modified and extended under the Secure Rural Schools and Community Self-Determination Act of 2000 (SRS). Under the bill, the County received steady annual payments from the federal government until 2006.

When the SRS lapsed in 2006, Congress extended the bill to 2007. In October 2008, legislation again reauthorized the SRS bill with a modified "step down" payment plan, distributing 90% of the 2006 payment level, followed by 90% of the prior year in each successive year until 2011. The final payment under the "step down" plan was \$7.61 million. In 2012, congress passed a one year reauthorization of SRS resulting in a final payment of \$7.28 million. Timber payments without the SRS will be \$602,000 or less than 4% of historic levels. The table below shows the SRS contribution in the past and projected funding in future years.

**Table 4: SRS Funding Levels** 

| 2014-15     | \$602,000       | Estimated Timber payment without SRS      |
|-------------|-----------------|---|
| 2013-14     | \$602,000       | Estimated Timber payment without SRS      |
| 2012-13     | \$7.28 million  | 2012 - one year reauthorization           |
| 2011-12     | \$7.61 million  | Final payment 2008 reauthorization        |
| 2010-11     | \$15.90 million | Step down, 90% of prior year              |
| 2009-10     | \$17.65 million | Step down, 90% of prior year              |
| 2008-09     | \$19.62 million | 2008 - Reauthorization with 90% step down |
| 2007-08     | \$21.77 million | 2007 - SRS extended one year              |
| 2006-07     | \$20.53 million | 2006 - SRS 2000 expires                   |
| 2005-06     | \$20.33 million |   |
| 2004-05     | \$19.80 million |   |
| 2003-04     | \$19.60 million |   |
| 2002-03     | \$19.36 million |   |
| Fiscal Year | Payments        | Remarks                                   |

The SRS funding source, which historically constituted more than one-half of the County Road Fund, is uncertain beyond Fiscal Year 2013/14. Responding to the diminishing SRS funding trend, the County CIP has aggressively scaled back its capital construction projects, and now emphasizes maintenance projects as the highest priority.

Lane and other counties continue working with congressional representatives to find a long-term solution to the loss of SRS funding. However, at this time continued SRS funding remains uncertain.

### **Federal Aid Programs**

In addition to federal county payments under SRS, the County has participated in and received federal funds through several federal aid programs created under the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU). Some of the programs the County has participated in the past are: Surface Transportation Program-Urban (STP-U), Local Highway Bridge Program (LHBP), the National Historic Covered Bridge Preservation (NHCBP) program, Transportation Enhancement (TE), and the Forest Highway Program. The majority of these federal programs, such as the NHCBP, require a non-federal dollar match, typically 10.27% of the total project cost. NHCBP is one of the major external fund sources in this CIP update.

With Federal passage of Moving Ahead for Progress in the 21<sup>st</sup> Century (MAP-21), Congress reauthorized Federal Highway funding for fiscal years 2013 and 2014. MAP-21 authorizes federal highway, transit and safety programs through September 30, 2014 and sets policies for the nation's surface transportation system, superseding SAFETEA-LU. MAP-21 significantly consolidates the highway program structure, eliminating most set asides, small formula programs and discretionary programs. Of significance to Lane County, MAP-21 has resulted in the elimination of the National Historic Covered Bridge Program (NHCBP). MAP-21 eliminates the Forest Highway Program and Public Lands Highway Discretionary Program and creates the Federal Lands Access Program. Active Transportation such as Recreational Trails, Safe Routes to School (SRTS), and Transportation Enhancement (TE) programs are merged into the Transportation Alternatives Program (TAP).

In general, MAP-21 eliminates many programs in which Lane County has successfully participated. In most cases, projects that were eligible under eliminated programs will remain eligible for funding under other programs. However, instead of, for example, covered bridges competing against other covered bridges for federal funding, covered bridges may be competing against some other major road improvement project, making it more difficult to secure funding. MAP-21 essentially changes the way in which Lane County must compete for federal funding. In addition, MAP-21 did nothing to address the long term fiscal inbalance in the Highway Trust Fund, in that revenue does not meet expenses, which could result in a cut of 25% or more in federal funding in 2015 and beyond.

### **Title II Funds**

SRS created Title II Funds that provided resources to improve watersheds to enhance fish and wildlife habitat, reduce the risk of catastrophic wildfires and similar projects on federal land. In the past, the County has received a portion of such funds for fish passage projects on County roads. Without reauthorization of SRS these funds no longer exist.

### **Other Federal Funds**

In the past, the CIP has successfully leveraged federal grants such as the federal Highway-Rail Crossing Program Section 130 funds. The County participated in the American Recovery and Reinvestment Act (ARRA) of 2009 economic stimulus package. With MAP-21, the County will continue to explore federal funding options available for projects as MAP-21 is implemented.

### **State Sources of Revenue**

State highway users fees consist of state motor fuel taxes, state weight-mile taxes for heavy vehicles, motor vehicle registration fees, fines, licenses, and other miscellaneous revenues. The fees and taxes collected are distributed to local government agencies, after debt servicing based upon applicable ORS sections. The resulting distributions are approximately as follows: 61% state, 23% counties, and 16% to cities. The county portion is distributed to all counties based on the ratio of registered vehicles to the statewide total. Lane County currently receives approximately 8.76% of the Statewide total distributed to counties. Oregon House Bill 2001 passed in 2009 modified the transportation related tax and fee structure to offset the potential loss of the federal funding to state and local agencies; however, the increase in the State Highway Fund revenue does not begin to match the decrease in Secure Rural Schools revenue. In contrast to past years, when SRS revenues provided more than half of Road Fund revenues, the State Highway fund now constitutes the primary source of revenue to the Road Fund.

### **Oregon Forest Highway Program**

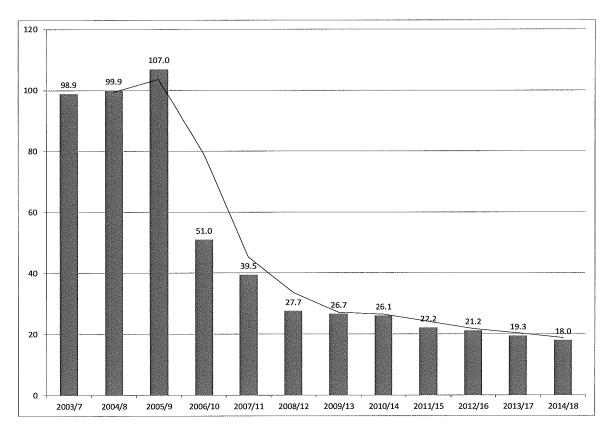

Lane County has significant miles of County roads that are inside national forests or connect to a national forest highway. These County roads are designated as forest highways and are eligible for annual forest highway fund grants. The Oregon Department of Transportation, United States Forest Service, and the Western Federal Lands Highway Division, jointly known as the Tri-Agency, administer annual distribution of about \$20 million in forest highway funds to participating agencies. Recently, Lane County has been successful in securing funds for Five Rivers Road culvert replacements and the Sweet Creek Road slide repair maintenance projects under this program. With the implementation of MAP-21 the Forest Highway Program has been replaced with the Federal Lands Access Program (FLAP). Lane County has submitted applications seeking funding under the new FLAP program.

### Other Funding Sources

Lane County has aggressively sought grant funding, including planning funds which can be used for project development and improve the likelihood of future project funding. Lane County has recently partnered with other agencies, combining resources, building consensus and leveraging opportunities to promote projects that benefit Lane County citizens.

### **CIP Trend: Looking Ahead**

The CIP trend chart below illustrates funding for capital investments in the Public Works Department. The department completed several urban improvement projects when the Road Fund was steady and supported by the SRS revenues. As the sunset of SRS approached and uncertainty about alternative revenue sources loomed, CIP funding has significantly dropped from a peak of \$107 million in Fiscal Years 2005-2009 to \$18 million in the current CIP update. This declining trend flattens to a minimum funding level that is inadequate to support even maintenance and preservation needs. Looking ahead, the Public Works Department's CIP funding will likely remain at minimum levels unless SRS revenue source is renewed or a new funding source is found to replace SRS funds.

**Chart 1: Capital Investments Trend** 

### Relationship with Other Planning Documents

### **Transportation System Plan**

The Lane County Transportation System Plan (TSP) guides how capital improvement projects are prioritized. Staff consults the TSP project list for potential projects every CIP update cycle. The TSP was most recently adopted in 2004. Lane County is also governed within the Eugene-Springfield Metropolitan area by *TransPlan*, the Transportation System Plan for the Eugene-Springfield metro area. Both documents must be consistent with the administrative rules for Oregon Statewide Planning Goal 12, the "Transportation Planning Rule" (TPR). The TSP and *TransPlan* describe goals and policies, the latter of which has the force of law.

In addition, of particular note to the CIP are policies in the *Financing and Recommended Improvements* section. The TSP lists three relevant Board-adopted goals in this regard:

Maintain long-term County Road Fund stability by making annual budget adjustments and following adopted priorities.

Use the County Road Fund effectively by following the priorities established in the 1991 Road Fund Financial Plan (updated 1995).

Maintain effective partnering relationships with cities and the Oregon Department of Transportation (ODOT).

To accomplish these goals, adopted policies are provided in part for setting priorities for expenditure of the CIP. The first priority is to maintain and preserve the County road and bridge system and to provide a safe roadside environment for the traveling public. The second priority, given available funds, is to enhance the County road system. The third priority, given available funds, is to provide economic development infrastructure financing and assistance to cities and ODOT projects of mutual interest.

The TSP identifies a list of unfunded projects that serve the community within at least a 20-year planning horizon. A technical needs assessment process, described in the TSP, resulted in the project list. The list also includes County road projects identified in adopted city TSPs.

The TSP project list is based solely upon a physical assessment of the road network and is not on a predicted revenue stream or on priorities established through public involvement. Priority setting occurs as part of the yearly budget and CIP adoption process. As revenues contract, the emphasis is placed on basic County operations, maintenance, and preservation. As revenues expand, priorities will include more County modernization projects and a broader sharing of resources with cities and ODOT.

### **Statewide Transportation Improvement Program**

The Lane County Capital Improvement Program is comparable to the function of the state's Statewide Transportation Improvement Program (STIP). These two documents may show identical projects when the CIP leverages ODOT or federally funded projects in the County. Such projects must be adopted in the STIP before any grant pass-thru occurs.

### **Metro Transportation Improvement Program**

The Central Lane Metropolitan Planning Organization (MPO) maintains the metro area Transportation Improvement Program (MTIP) for federal funds management purposes. Lane County is a partner in the metro area transportation coordination in the MPO. Lane County projects of regional significance inside the metro boundary are listed in the MTIP. Typically Lane County CIPs have included local matches for MTIP projects.

### CIP Process

### **Staff Draft**

The CIP process begins each fall with staff evaluation of the previously adopted CIP projects status. The projects in the first fiscal year of the program in the current CIP are reviewed for project status. Those projects that will be completed or are under construction by fall are removed from the list. Projects in the following year are moved up for execution. County staff evaluates the progress of projects in the latter four years of the program and adjusts the program as needed to reflect best estimates of schedules, project scope, and cost. At this stage, staff also evaluates projects in relation to department's budgets and makes any recommendations for additions or deletions from the program. New projects are added if additional funding is available through external sources. Staff also identifies a list of candidate projects for development that brings benefits to the community that are eligible for external grant opportunities. Benefits of the individual proposed projects are evaluated and ranked.

In past CIP cycles, staff has used a tool referred to as the Prioritization Matrix. Because 98.6% of the current Road Fund CIP resources have been allocated to Preservation and Rehabilitation categories, the scope of work in project selection and prioritization has diminished to the point that there is nothing to prioritize as compared to past CIPs, eliminating the need for a Prioritization Matrix. A prioritization process will be reinstituted when the Road Fund has funds available to apply toward projects in other categories. Project selection is currently a continuation of previously adopted and prioritized projects. This CIP refines the project costs and adjusts construction schedules. Outside of preservation and maintenance work, no new projects have been added to the CIP. A few new projects have been placed on the projects for development list, either due to an impending maintenance need, a safety issue, or a partnership with another agency.

In consideration of the County's financial position, staff recommended to the Roads Advisory Committee that the current CIP focus on preservation and rehabilitation. No enhancement or improvement projects have been proposed in this CIP.

### **Public Participation**

Public participation is essential to the CIP process. Citizen input plays an important role in project selection and the delivery process. The public can participate in the process by providing written or oral testimony at two public hearings, conducted before the Roads Advisory Committee (RAC) and the Board of County Commissioners (Board). The RAC hearing occurs in February for which public notices are published. The CIP related information and documents are posted on the Lane County Public Works web site at <a href="http://www.lanecounty.org/Departments/PW/TransPlanning/Pages/cip.aspx.">http://www.lanecounty.org/Departments/PW/TransPlanning/Pages/cip.aspx.</a>. The public can participate by sending their written comments to staff. The public also has an opportunity to comment on the RAC's recommendation during the second public hearing before the Board that occurs around the 1st of May.

### **Roads Advisory Committee Action**

The RAC has the important role of promoting public participation in the road related matters, including collecting public input on staff's draft CIP. The RAC is a committee comprised of volunteer citizens appointed by the Lane County Board of Commissioners (Board). It is tasked with helping the Board on transportation matters including developing the CIP. The RAC seeks public comments on the staff proposed CIP before making a recommendation to the Board. The RAC normally engages in the CIP review process between January and March.

Based on public input and other considerations, the RAC may ultimately give preference to certain projects. During the process, staff provides as much information as needed about a proposed project so that the RAC can make informed decisions. After considering information provided by staff and input by the public, the RAC deliberates on the draft and forwards a recommendation to the Board.

Once projects are adopted and scheduled for design, citizen input is again sought on specific design concepts for individual projects. In this context, the RAC may elect to set a public hearing before adopting a Board recommendation on a preferred project alternative.

### **Board Action**

The Board reviews the recommendation forwarded by the RAC. Updates or changes proposed by the public, staff, and the RAC are advisory to the Board. The Board has final approval authority for the CIP and expenditure of the County Road Fund. The Board holds a second public hearing on the draft CIP before adopting it at least 30 days prior to adopting the County budget. The Board may change project priorities at any time; projects may be added, deleted, or combined with new projects as situations arise.

In order to meet the County budget requirement, the Board is typically asked to adopt annual CIP updates in late April or early May each year. The following section provides an overview of the CIP 2014-2018 approved by the Board in April 2013.

### **CIP Categories**

This CIP publication is intended to provide public information regarding Public Work's roadway improvement projects that will be open to public bid. The adopted projects are listed on the executive tables beginning on page 23 and are grouped in program categories as described below.

### Right-of-Way

This program category lists cost estimates for right-of-way acquisition for CIP projects. Typically, general construction projects involve right-of-way acquisitions. Maintenance projects also may require construction easements or additional right of way. Cost estimates towards such right-of-way related expenses are shown under this category. These estimates are preliminary and subject to change based on final design of each project and individual acquisitions. County acquisitions are based on appraisals of the land and improvements to be acquired and any associated compensable damages.

### **General Construction**

This program category addresses improvement needs arising from geometric standards, pavement structure, or safety issues. Lane County has more than 27 miles of collector roads inside the Eugene-Springfield metropolitan area. Many of these roads do not meet modern geometric standards. Historically, this category of improvements constituted almost one-third of the CIP allocation. This is not the case now; no general construction or urban improvement projects are proposed in this CIP.

### **Structures**

Structures are generally localized projects such as bridges and retaining walls. The structures improvement program addresses bridge rehabilitation and replacement as indentified and recommended by the National Bridge Inventory System. Non-bridge types of localized structural improvements such as retaining walls and toe walls are also included in this category.

Historically, the funding for structures projects mostly came from state or federal grant programs. In recent years the County replaced or rehabilitated aging bridges under the Oregon Transportation Investment Act of 2003 (OTIA III) or through the Local Highway Bridge Program (LHBP), formerly known as federal Highway Bridge Replacement and Rehabilitation (HBRR) program. The County is also actively seeking other funds as they become available. However, new funding sources will not address seismic deficiencies in the remaining bridges.

### Preservation/ Rehabilitation Fund

This category has three subcategories of projects to address pavement and bridges preservation and rehabilitation needs.

The Overlays and Rehabilitation subcategory is specific to pavement preservation and constitutes the largest component of the CIP. The allocated funds are used towards annual pavement overlay and rehabilitation projects to respond to current pavement conditions. Asphalt Concrete (AC) overlay or chip sealing are commonly used preservation techniques in Lane County. Although AC overlay projects are maintenance projects, they fall under the

definition of public improvements<sup>1</sup> when the depth of AC is two inches or more, or when a proposal has an estimated cost of \$125,000 or more. Therefore, AC projects are included in the CIP while Chip Seal projects are typically not included. Individual overlay projects are not itemized in the CIP except when project specific external funding is involved.

Pavement condition information is gathered annually and reported as the Pavement Condition Index (PCI). The PCI is the basis for prioritizing preservation and rehabilitation projects for the existing road system. Lane County uses the computer-based Pavement Management Program application and field inspections to prioritize annual pavement preservation projects. The program identifies suitable treatment type and implementation timing.

The Bridge Rehabilitation and Preservation program exists to respond to the maintenance and preservation needs of County bridges. Bridge rehabilitation project are generally significant in scope and in general involve huge capital. Such projects may be placed under the structures category. The funds allocated in this category are mostly used for minor repair works and for providing local matches to federal and state funds. Bridge rehabilitation priorities are established using the bridge sufficiency rating as part of the of bridge condition assessment through the statewide bridge inspection program. The inspection report identifies and recommends maintenance for bridges needing repair.

The Covered Bridge Preservation subcategory dedicates a portion of the Road Fund towards preservation of the seventeen existing covered bridges in the County. In recent years, most covered bridge preservation projects have been funded through the National Historic Covered Bridge Program. These projects are typically bid and administered through Oregon Department of Transportation.

### Safety Improvements

Safety improvement projects are intended to address localized problems that do not require major reconstruction. Staff recommends projects as locations are studied and identified. Generally, these projects will have low cost, are small in scope, have limited impact on adjacent properties, and are relatively easy to implement. These funds may be utilized as local matches for external funding applications.

### Fish Passage Projects

The Oregon Department of Fish and Wildlife has identified nearly 300 culverts under Lane County roads that are believed to impede Coho or Chinook salmon passage at some stage in their lifecycles. The establishment of this fund is intended to dedicate Road Fund resources to replace these culverts and make them fish passable.

<sup>&</sup>lt;sup>1</sup> ORS 279C.305 defines resurfacing of highway, roads, or streets at depth of two or more inches and at an estimated cost that exceed \$125,000 as a public improvement.

### **Projects for Development**

The projects for development category encompass projects that are unfunded but are highly ranked and prioritized. These projects are candidate CIP projects if funds become available.

### CIP 14-18 Overview

The Road Fund allocation for CIP fiscal years 2013/2014 through 2017/2018 is about \$18.00 million, which is about 7% less than last year's CIP. The table below compares the allocation of Road Fund dollars between the previous allocation and the current allocation for each CIP category. Although the total project costs of externally funded projects are shown, only local match portions are included in the table for the Road Fund comparison purpose.

**Table 5: Program Totals by Category** 

| PROGRAM TOTALS BY CATEGOR      | ov l | CIP 13-       | 17      | CIP 14-                   | 18      |
|--------------------------------|------|---------------|---------|---------------------------|---------|
| PROGRAW TOTALS BY CATEGOR      | ` [  | Amount        | Percent | Amount                    | Percent |
| Right-of-Way                   |      | \$20,000      | 0.10%   | \$0                       | 0%      |

| Structures                     |      | \$0 <b>*</b>  | 0%      | \$0 <b>*</b>              | 0%      |
| Preservation / Rehabilitation  |      | \$18,950,000* | 98.35%  | \$17,750,000 <del>*</del> | 98.61%  |
| Safety Improvement             |      | \$250,000     | 1.30%   | \$250,000                 | 1.39%   |
| Payment to other Gov. Agencies |      | \$0           | 0%      | \$0                       | 0%      |
| Fish Passage Projects          |      | \$50,000      | 0.25%   | \$0                       | 0%      |
| Bike Ped Improvements          |      | \$0 <b>*</b>  | 0%      | \$0 <b>*</b>              | 0%      |
| To                             | otal | \$19,269,920  | 100%    | \$18,000,000              | 100%    |

As in the preceding CIP, this CIP allocates a significant percentage of the Road Fund towards Preservation and Rehabilitation. This category is broken down into three subcategories, including Overlays and Pavement Rehabilitation, Bridge Rehabilitation and Preservation, and Covered Bridge Preservation. The CIP allocates \$3.0 million per year to Overlays and Pavement Rehabilitation, which is a decrease of \$1.5 million compared to the previous 4 years. Annual \$275,000 fund allocations are made for Bridge Rehabilitation and Preservation, as well as identical annual allocations towards Covered Bridge Preservation. As shown above, the combined preservation and rehabilitation category expenses constitute about 98.6% of the total Road Fund expenses.

Lane County has successfully utilized CIP funds to leverage grant funding opportunities, particularly in the Bridge Rehabilitation and Preservation, and Covered Bridge Preservation categories. Grant funding for this CIP cycle includes \$2.349 million in National Historic Covered Bridge Preservation (NHCBP) program grants and \$1.886 million in Local Highway Bridge Program (LHBP) grants. In addition to preserving covered bridges, these funds will be used to replace the deteriorating Cash Creek Bridge on Marcola Road.

\_\_

<sup>\*</sup> Adjusted Road Fund expenses for construction costs only.

Outside of the preservation and rehabilitation categories, the CIP allocates \$50,000 per year to the safety improvements category. These funds may be applied as match funding to leverage grant opportunities, or to address localized safety problems.

Due to budget limitations in the Road Fund, there is currently no money available to fund projects under the Right-of-Way, General Construction, Structures, Fish Passage Projects, Bike and Pedestrian Improvements, or the Payments and Matches to other Agencies categories.

During the peak of the SRS funding, the County shared its revenue and cost of improvement projects with other local partner agencies, including cities and state. The Payments and Matches to Other Agencies category is intended to highlight partnership contributions when they can be made. This CIP does not include any payments. However, it does include one overlay project of mutual interest. The Glenwood Boulevard-East 17<sup>th</sup> Avenue Overlay project in Springfield is proposed to address anticipated pavement deterioration after ODOT completes the Willamette Bridge construction. The roadway is currently used as a detour route for I-5 Franklin Boulevard exit traffic. The executive tables reflect the City, state, and County contributions to keep the road in repair.

The summary tables beginning on page 23 in the next section show detailed project listings and estimated project costs.

### **Executive Summary Tables**

### Capital Improvement Program Fiscal Years 2013-2017 Summary Table

Table 6: Annual Expenses by CIP Category

|  | FY 13-14    | FY 14-15    | FY 15-16    | FY 16-17    | FY 17-18   | 5 YR Total   |

<sup>&</sup>lt;sup>1</sup> Right-of-Way category lists cost estimates for right-of-way acquisition for CIP projects. Right-of-way costs are approximate and based on anticipated property impacts that are not defined in the early stages of project development. These costs are subject to change as design concepts are refined.

<sup>&</sup>lt;sup>2</sup> Due to budget limitations in the road fund, there is currently no money available to fund projects in the Right-of-Way category.

<sup>3</sup> The General Construction category addresses improvement needs to meet current geometric, pavement, or safety standards. Historically, this category had constituted almost one-third of the CIP allocation, especially when County roads were being upgraded to meet current urban design

standards. <sup>4</sup> Due to budget limitations in the road fund, there is currently no money available to fund projects in the General Construction

| Subtotal Bridge Rehabilitation and Preservation     | \$275,000 | \$275,000  | \$275,000  | \$275,000 | \$275,000   | \$1,375,000 |

<sup>&</sup>lt;sup>5</sup> The Structures category is generally for new or major replacements of County bridges and/or retaining walls. This category deals with major bridge rehabilitation and replacement as identified and recommended by the National Bridge Inventory System. Seismic deficiencies would also be funded out of this category.

<sup>&</sup>lt;sup>6</sup> Due to budget limitations in the road fund, there is currently no money available to fund projects in the Structures category.

<sup>&</sup>lt;sup>7</sup> The Bridge Preservation / Rehabilitation subcategory funds maintenance and preservation needs of County bridges.

<sup>&</sup>lt;sup>8</sup> The Cash Creek Bridge Replacement project is being funded with Local Highway Bridge Program (LHBP) grant funding with a grant allocation of \$1,449,140. The amount shown is the required local match at 10.27% of the project cost which is \$165,860. The amount shown is the required local match as recommended by the National Bridge Inventory System (NBIS). The funds will be

utilized to pay for emergency bridge maintenance projects or as local matches required for securing external funding for bridge projects.

<sup>10</sup> The overall Preservation / Rehabilitation Funds category has three subcategories to address pavement and bridge preservation and rehabilitation

<sup>1)</sup> Overlays and Pavement Rehabilitation

<sup>2)</sup> Bridge Rehabilitation and Preservation

<sup>3)</sup> Covered Bridge Preservation

<sup>11</sup> The Overlay and Pavement Rehabilitation subcategory funds annual pavement overlay and rehabilitation projects responding to managed

pavement conditions.

12 The Pavement Management Program (PMP) identifies individual roads needing preservation treatment, treatment types, and timing based on current pavement Management Program shows funds available for pavement preservation after project specific local matches are set aside for current pavement conditions. This line item shows funds available for pavement preservation. The Public Works FinPlan assumes \$3.0 million for FY 2013/14 available for pavement preservation and

<sup>\$3.0</sup> million per year for subsequent fiscal years.

13 This project addresses pavement wear and tear on Glenwood Boulevard and an adjacent city road resulting from the I-5 off ramp detour operations contribution from ODOT, a \$100,000 contribution from the Lane County Waste Management Division, and the remaining \$250,000 from the overlays City of Springfield jurisdiction. The amount shown is the construction cost which is comprised of a \$105,000 contribution from the City, a \$150,000 via the County facility. The County is administering the \$605,000 Pavement Rehabilitation project which includes a section of East 17th Avenue under and pavement rehabilitation fund. Intergovernmental agreements have been executed securing the funding from the City of Springfield and ODOT

| TOTAL-Preservation Rehabilitation Program   \$3,905,000   \$3,550,000   \$3,550,000   \$3,550,000   \$1,550,000   \$18,105,000 | \$3,905,000 | \$3,550,000   | \$3,550,000 | \$3,550,000 | \$3,550,000 | \$18,105,000          |

<sup>14</sup> The Covered Bridge Preservation subcategory dedicates a portion of the Road Fund to preservation of the seventeen existing covered bridges in -ane County.

<sup>15</sup> These Covered Bridge rehabilitation projects have been funded through National Historic Covered Bridge Preservation (NHCBP) program funds for

a total combined grant allocation of \$730,940. The amounts shown are the required local match at 10.27% for each of the projects.

The Wildcat Covered Bridge project is being funded through a combination of NHCBP and HBP funds. The grant allocations include \$330,655 of NHCBP funds and \$269,190 of HBP funds for a total grant allocation of \$599,845. The required local match of 10.27% is \$68,655.

amount shown is a combination of the required local match at 10.27% and additional costs associated with post-tensioning of the bridge which was 17 The Belknap Covered Bridge rehabilitation project is also funded through NHCBP program funds for a total grant allocation of \$390,230. The work identified as necessary after grant funding was awarded. The 10.27% match is \$44,670 and the estimated post tensioning cost is \$47,500

<sup>18</sup> The Mosby Covered Bridge project is being funded through a combination of NHCBP and HBP funds. The grant allocations include \$897,300 of NHCBP funds and \$167,795 of HBP funds for a total grant allocation of \$1,065,095. The required local match of 10.27% is \$121,905.

<sup>19</sup> This line item shows the remaining Covered Bridge Rehabilitation funds available for programming covered bridge maintenance and preservation projects needed in the future after project specific local matches are deducted from the available annual \$275,000 allocation. These funds are intended to provide emergency maintenance or local matches to secure external funds.

<sup>&</sup>lt;sup>20</sup> The Safety Improvements category is intended to address funding of localized safety problems that do not require major reconstruction.

<sup>&</sup>lt;sup>21</sup> This line item is the net un-programmed safety improvement funds available to respond to minor safety improvements or to provide local matches for any external funding opportunities after project specific expenses are identified. This is consistent with the FinPlan's annual \$50,000 allocation for

safety improvements.

22 The Fish Passage Projects category is intended to dedicate Road Fund resources toward replacing culverts under Lane County roads that are believed to impede Coho or Chinook salmon passage. The set-aside amount can be used for future capital bid projects or allows Public Works and partner agencies to plan for and / or seek funding opportunities.

Due to budget limitations in the road fund, there is currently no money available to fund capital projects in the Fish Passage Projects category.

<sup>&</sup>lt;sup>24</sup> The Bike and Pedestrian Improvements category is intended to fund projects that enhance pedestrian and bicycling opportunities. Projects in this category include installation of bike lanes, sidewalks, striping to delineate bike lanes, or the addition of paved shoulders for bike and pedestrian use. Due to budget limitations in the road fund, there is currently no money available to fund projects in the Bike and Pedestrian category.

<sup>26</sup> The Payments and Matches to other Agencies category historically funded the County/City Road Partnership Program and the Board's Capital Project Partnership Program (CaPP). Payments in this category were also used for matching funds on grant opportunities for other Agencies. <sup>27</sup> Due to budget limitations in the road fund, there is currently no money available to fund payments and matches to other agencies.

<sup>&</sup>lt;sup>28</sup> The Revenue category shows project funding secured for CIP projects, outside of the road fund resources.

<sup>&</sup>lt;sup>29</sup> This line item reflects ODOT committed contribution towards repaving Glenwood Boulevard as per an existing IGA with the County. Glenwood Boulevard is currently serving as a detour route for the closed I-5 Franklin Boulevard off-ramp.

<sup>30</sup> This is the estimated reimbursable construction cost for the overlay of East 17th Avenue (city street) which will likely be administered by the County with a contract packaged with the Glenwood Overlay project.

<sup>31</sup> This line item is the anticipated participation / contribution from the Lane County Waste Management Division (WMD) for improvements on E 17th Avenue (County section west of Glenwood Blvd).

### Intentional Blank Page

### **Project Location Map**

### PROJECT NOTES AND MAP KEY NUMBERS

- (1) **Austa Road**: Wildcat Covered Bridge on Austa Road has been proposed for rehabilitation and post-tensioning. Grant funding for this work has been secured from the National Historic Covered Bridge Preservation (NHCBP) Program and from the Local Highway Bridge Program (LHBP).
- (2) **Glenwood Boulevard/E. 17**<sup>th</sup> **Street**: The project limit includes E. 17<sup>th</sup> Ave and Glenwood Boulevard near the I-5 off ramp. The project is proposed to address potential pavement deterioration resulting from increased traffic volumes related to the nearby I-5 Willamette River Bridge project. Glenwood Boulevard is currently used as a detour route to Franklin Boulevard due to the closure of the Franklin Blvd. exit ramp during the construction of the Willamette Bridge.
- (3) **Jasper-Lowell Road**: Unity Covered Bridge has been proposed for re-roofing. Lighter weight roofing materials will benefit the bridge by reducing dead load. Grant funding for this work has been secured from the National Historic Covered Bridge Preservation (NHCBP) Program.
- (4) Layng Road: Mosby Creek Covered Bridge on Layng Road is load posted at 8 tons. The bridge has bee proposed for rehabilitation and post-tensioning. Grant funding for this work has been secured from the National Historic Covered Bridge Preservation (NHCBP) Program and from the Local Highway Bridge Program (LHBP).
- (5) Marcola Road: Cash Creek Bridge on this road is in poor condition and has been proposed for replacement. Grant funding for this work has been secured from the Local Highway Bridge Program (LHBP).
- (6) **Old Mill Road**: Office Covered Bridge on Old Mill Road has been proposed for rehabilitation, strengthening of floor beams, and drainage improvements. Grant funding for this work has been secured from the National Historic Covered Bridge Preservation (NHCBP) Program.
- (7) Place Road: Pengra Covered Bridge on Place Road has been proposed for re-roofing. Lighter weight roofing materials will benefit the bridge by reducing dead load. Grant funding for this work has been secured from the National Historic Covered Bridge Preservation (NHCBP) Program.
- (8) **W. King Road**: Belknap Covered Bridge on W. King Road has been proposed for rehabilitation and post-tensioning. Grant funding for this work has been secured from the National Historic Covered Bridge Preservation (NHCBP) Program and from the Local Highway Bridge Program (LHBP).

# LANF COUNTY PUBLIC WORKS CAPITAL IMPROVEMENT PROGRAM

**Project Descriptions** 

# **Wildcat Covered Bridge**

Austa Road Milepost 0.091 Road Fund Cost \$68,655

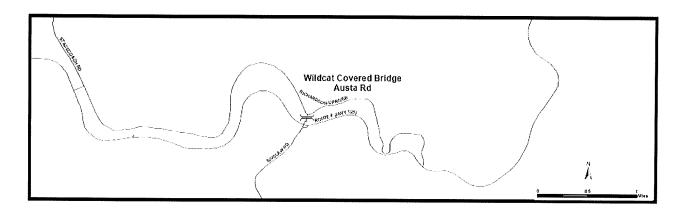

Map Key No. 1

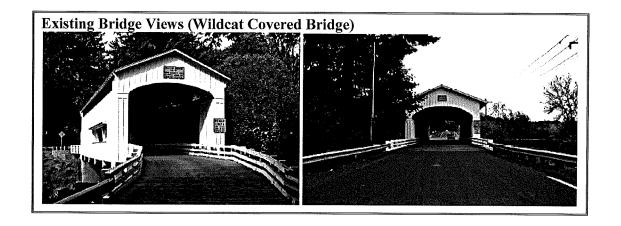

Project Scope: Re-roof Wildcat Covered Bridge and replace deteriorated structural members.

| Bridge Name    | No.    | Road Name  | Milepost | FC    | Funding<br>Status |
|----------------|--------|------------|----------|-------|-------------------|
| Wildcat(Austa) | 39C446 | Austa Road | 0.091    | Local | Funded            |
|                |        |            |          |       | NHCBP/LHBP        |

**Existing Bridge Condition** 

| Name    | Length | Width | Height | ADT | Truck | Load   | SR   |
|---------|--------|-------|--------|-----|-------|--------|------|
| Wildcat | 161'   | 15'   | 14'    | 54  | 1     | Posted | 25.1 |

Wildcat Covered Bridge is in a deteriorated state due to traffic loads, weathering, vandalism, and pests. The truss members, stringers, and floor beams are all in a state of decay and have insect infestation issues affecting the bridges structural integrity and longevity. Roofing materials on this bridge are at the end of service life and are heavy.

### **Proposed Solution**

The bridge rehabilitation work will include replacement of deteriorated structural truss members, installation of post-tensioning, tuning and adjustment of the truss, deck replacement, fumigation, and roof replacement with lighter roofing materials to reduce dead load. The siding at the portal ends will be replaced and repainted. The project has been funded with National Historic Covered Bridge Preservation (NHCBP) program and Local Highway Bridge Program (LHBP) grants, together with the required 10.27% local matches.

Glenwood Boulevard is currently a detour route during the nearby I-5 bridge construction and Franklin Blvd. off ramp closure. Pavement deterioration is anticipated on the roadway during the detour period. E. 17<sup>th</sup> Ave. is adjacent to Glenwood Blvd. and serves Waste Management's Glenwood facility to the west and is a City of Springfield street which passes in front of LTD's facility to the east. E. 17<sup>th</sup> Avenue is in need of pavement preservation and rehabilitation work. A maintenance project is needed to extend the life of these pavements.

### **Proposed Solution**

The project proposes to rehabilitate and improve base material and wearing surfaces after the completion of the I-5 Willamette River Bridge construction. The proposed solution for Glenwood Blvd. includes full depth reclamation (FDR) of the road base material, a 3-inch thick asphalt concrete (AC) base lift in the travel lanes, and a 1.5-inch AC wearing course overlay of the entire surface. E. 17<sup>th</sup> Ave. will include FDR and 4 inches of paving. ODOT and the Waste Management Division are contributing to the project. The City of Springfield may be participating to include the city portion of E. 17<sup>th</sup> Ave. in the project.

# Vicinity map

Roofing materials on Unity Covered Bridge are at the end of service life and are in need of replacement. In addition existing roofing materials are heavy and add to bridge dead load.

### **Proposed Solution**

Replace the existing roofing material with lightweight roofing materials, thereby reducing dead load. This strategy will defer costly structural improvements needed in the bridges. This project has been funded with National Historic Covered Bridge Preservation (NHCBP) program grant funding.

SR 25.9 Load Rating 8 Ton (operating)

Width 15.1 feet Height 12' 4" Span 135 feet

Existing Bridge Views

Mosby Creek Covered Bridge has deteriorated due to traffic, weathering, vandalism, and pests. Key bridge members such as truss members, stringers, and floor beams are in a state of decay that is affecting its load carrying capacity. Currently, the bridge is posted for a load restriction (Posted Load 8 ton).

# Proposed Solution<sup>a</sup>

The state of decayed structural members requires a new bridge. However, considering the historic importance of the covered bridge, it may merit restoration by replacing only the members that are decayed or damaged. Decayed stringers, floor beams, and decking will need to be replaced. The bridge will be dismantled during restoration and rebuilt completely with sound structural members and post-tensioning will be added. The bridge roof will also be removed and replaced with a lightweight roof. In addition, the bridge will be repainted.

<sup>&</sup>lt;sup>a</sup> Mosby Creek Covered Bridge is a candidate for rehabilitation/replacement owing to its poor structural condition rating and low overall bridge sufficiency rating (SR). Bridges with an SR below 50 are generally replaced with a new structure.

<sup>&</sup>lt;sup>b</sup> The Road Fund cost shown is the required local match for federal funding, which is calculated at the required match rate of 10.27%. Project costs shown are based on similar projects completed in the past.

<sup>&</sup>lt;sup>c</sup> This project has been approved for National Historic Covered Bridge Preservation (NHCBP) program grant funding.

<sup>&</sup>lt;sup>d</sup> This project has also been approved by the Local Agency Bridge Selection Committee for an additional \$168,000 from the Local Highway Bridge Program (LHBP).

<sup>&</sup>lt;sup>e</sup> The selection factors are shown for informational purposes only. Bridge projects are typically not ranked, as are other project types for funding priority. Bridge maintenance priority is based on the statewide bridge inspection and reporting program, also known as National Bridge Inventory System, recommendations.

| Span        | 46 feet            |                    | temporary shoring  |

# **Existing Bridge View**

Cash Creek Bridge is structurally and functionally deficient and has no detour options. The bridge has been continually experiencing settlement issues. Lane County has installed additional timber posts to provide temporary support to the piles along with other measures to try to stabilize the structure. Existing timber piles are rotting and crushed, the banks are eroding and temporary shoring is being undermined. The bridge is in need of replacement.

### **Proposed Solution**

Replace the bridge with a pre-stressed concrete bridge consistent with current Oregon bridge design standards. The bridge is to be constructed in two stages allowing traffic flow across the creek using a temporary traffic signal, thus avoiding a temporary detour bridge. The new bridge will add load bearing capacity and improve hydraulics.

Office Covered Bridge is identified for rehabilitation work to address drainage problems at the bridge ends that are leading to decay, insect damage, and loads resulting from two existing city waterline pipes.

### **Proposed Solution**

The proposed work includes strengthening the floor beams by splicing additional wood members and replacing deteriorated floor beams. Additional work includes installing a drainage system at the ends of the bridge; replacing end post, cap beam and truss diagonal at Bent 1; replacing decayed stringers and floorboards; replacing two interior damaged diagonals; fumigating the structure and repairing insect damage. The project has been funded with National Historic Covered Bridge Preservation (NHCBP) program and Local Highway Bridge Program (LHBP) grants, together with the required 10.27% local matches.

**Existing Bridge Condition** 

ADT 240 Bridge No 39C123
Bridge Type Covered Bridge Truck Traffic 10

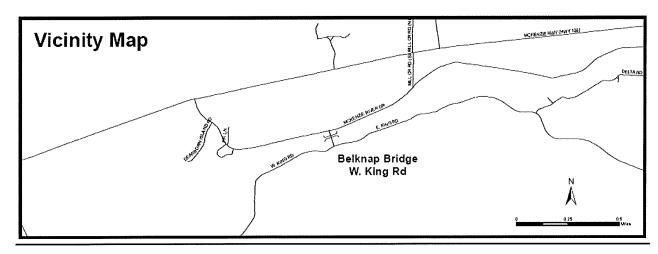

SR 22.5 Load Rating 11 Ton (operating)

Width 23 feet Height 15.7' Span 135 feet Length 181

Existing Bridge Views

This bridge has deteriorated due to traffic, weathering, vandalism, and pests. Key bridge members such as truss members, stringers, and floor beams are in a state of decay that is affecting its load carrying capacity. Currently, the bridge is posted for a load restriction of 11 tons for all vehciles. The out-of-direction travel due to the load posting is 4.3 miles.

### **Proposed Solution**<sup>a</sup>

Bridge rehabilitation work includes replacement of deteriorated structural truss members, installation of permanent post-tensioning, adjustment and tuning of the truss, replacement of floor boards and stringers as needed, fumigation, repainting of house and tenson rods.

<sup>&</sup>lt;sup>a</sup> The Belknap Covered Bridge is a candidate for rehabilitation owing to its poor structural condition rating and low overall bridge sufficiency rating (SR). Bridges with an SR below 50 are generally replaced with a new structure.

<sup>&</sup>lt;sup>b</sup> The Road Fund cost shown is the required local match for federal funding, which is calculated at the required match rate, of up to 10.27% plus an additional \$47,500 for costs associated with post-tensioning of the bridge. Post-tensioning was work identified after grant funding had been allocated. Post-tensioning will improve load capacity. The project costs shown are based on similar projects completed in the past.

<sup>&</sup>lt;sup>c</sup> This project has been approved for National Historic Covered Bridge Preservation (NHCBP) program grant funding

<sup>&</sup>lt;sup>d</sup> The selection factors are shown for informational purposes only. Bridge projects are typically not ranked, as are other project types for funding priority. Bridge maintenance priority is based on the statewide bridge inspection and reporting program, also known as National Bridge Inventory System, recommendations.
