Summary of Map J: George Grier

This map is a collaboration of my original Map A, its cleaned up version Map I, and Kevin's original Map F. My original maps failed to combine the River Road/Santa Clara area and the Bethel area which Kevin's map did. Kevin's map had District 2 expanding into the Harlow Road area. The combined map has the following characteristics:

1. District 3 retains Harlow Road Area: District 2 loses same area, retains remainder of Map F for District 2.
2. District 2 adds Seavey Loop, Laurel Hill and Russell Creek Basin: District 3 loses Laurel Hill and Russell Creek; District 5 loses Seavey Loop
3. District 4 gains Skinner Butte; District 3 loses same
4. District 5 gains a bit east of Oak Patch and City View; District 3 loses same.

<u>Pros and Cons:</u>

<u>Pros:</u>

1. The primary strength of this map is its ability to keep most communities of interest intact.
2. Rural communities of interest, neighborhoods, our small cities and unincorporated areas are for the most part undivided and still represented by our "rural" commissioners.
3. Analysis of demographics from the census data do not indicate any significant changes from current configurations nor impacts on communities of interest.

<u>Cons:</u>

1. There are some rural areas that will be absorbed into District 2. This potentially leaves them with unfamiliar representation.
2. District 2 expands to the west of I-5, which has been an historic boundary between the urban communities. However, this has been preceded by the absorption of Glenwood into Springfield's area of influence, and these proposed additions are adjacent to Glenwood.
3. The expansion of District 2 into more rural areas and areas within the city limits of Eugene will require an adjustment for both the Commissioner and the constituents.
4. This is either a Pro or a Con depending on your criteria. There is an inherent problem with the River Road/Santa Clara area. The western margin of the neighborhood boundary is within the Bethel School District. The remainder, which is represented by the boundaries of this Map J, is within the 4J district. There needed to be a choice made between drawing the map to include all of the neighborhood association boundaries or the school districts. Since the ballot styles are predominantly determined by the school district, the choice was made to draw the lines contiguous with the school district. The

result is some of the neighborhood boundary falls outside the map lines. However, about 90% of the population within the neighborhood boundary falls within the map lines. There appears to be some minor adjustments that could be made to insure the map lines are co-terminus with the school district boundaries.
